# Remote Patient Monitoring

Virtual Patient/Provider Wound Data Sharing

### Clinician creates patient in inSight App
- Enable patient access
- Assign patient assessment schedule
- Opt-in to follow patient
- Send invitation to patient via email

### Patient downloads app and registers
- Use invitation from provider to register
- Create unique password for secure access
- Download inSight app

### Patient completes assessment & submits
- Take wound measurement photo using mobile device
- Submit image, measurement and questionnaire to clinician
- Measurement/tracing completed automatically during upload

### Clinician review of wound tracing
- Email, in-app, and push notifications upon data & messaging submission
- Ability to revise & accept automatic tracing

**Benefits: Enables patient engagement, increased patient quality of life and increased health system efficiency**

# Live Video Conferencing

Enabling face to face interactions between patients, healthcare providers and specialists

### Remote and Live Patient Interaction
- Video chat capability between patient and clinician
- Real-time access to patient data and images during video conference

### Protected access to patient data
- Complete assessments in a timely manner
- Evaluate treatment protocols for potential changes

### Produce Reporting Documents
- Billing and QA information easily available
- Streamline referral process
- View wound history & evaluate healing trends

**Benefits: Faster referrals, convenient patient-provider interactions, covid-19 restrictive patient interaction support**

# Access to Data

A secure data driven approach to wound care for providers and clinical researchers

### Secure Platform
- Secure web portal access
- HIPPA and GDPR compliant

### Store & Fwd Data Sharing
- Access patient captured wound images
- Securely share patient data when appropriate

### Integrations with EHR/EPR
- Integrated with Cerner, Epic, Meditech, and other EHR, HL7 and FHIR ready
- Streamline patient data collection
- API Dashboard available

### Business Intelligence
- Analytics tool & dashboards
- Use wound data to inform business decisions
- Drive precision medicine

**Benefits: Easily transfer patient data to care team, use evidence-based medicine to make decisions**
